Tenders must be delivered only to Room 237, Douglas Building, Victoria, which is open from 8.30 a.m. to 12 noon and 1 p.m. to 4.30 p.m., Monday to Friday, except holidays.

The contract consists of the construction of four piers supported on steel H-piles, and two abutments on spread footings.

Plans, specifications, and conditions of tender may be obtained from the Provincial Government Plan Viewing Room, 108, 501 West 12th Avenue, Vancouver, B.C. V5Z 1M4 (telephone 879-7531), or from the undersigned for the sum of \$10 (cheque or money order made payable to the Minister of Finance), which is not refundable.

Construction of this contract shall conform to the requirements of the applicable sections of the Department of Highways "General Specifications for Highway Construction." If the bidder does not already have a copy of these specifications, one may be obtained from the Provincial Government Plan Viewing Room, Vancouver, B.C. V5Z 1M4, or from the undersigned for the sum of \$10 (cheque or money order made payable to the Minister of Finance), which is not refundable. All copies purchased are registered and amendments are forwarded when issued.

A performance bond and a labour and material payment bond, each in the amount of 50 per cent of the tendered sum, in a form acceptable to the Minister of Finance, must then be provided by the successful bidder upon receipt of notice of acceptance of tender. If a bid bond is supplied, this bond shall be forfeited if the tenderer declines to enter into a contract if called upon to do so. In the event that the successful bidder supports his tender with a certified cheque, but fails to produce the required performance bond and labour and material payment bond within a period of 14 days from the date of issuance of notice that his tender is accepted, the Minister of Highways shall have the right to forfeit the tender deposit in its

full amount or to the extent of the difference in cost between the bidder's tender and the accepted tender, whichever is the lesser.

Tenders must be made out on the forms supplied and enclosed in the envelope furnished.

The tender submitted is irrevocable for 60 days and may not be altered, amended, or withdrawn for any cause without the written permission of the Minister.

Tenderers are advised that all bidders will be required to satisfy the Minister of Highways, in writing, that they have the necessary qualifications to successfully perform the work. It is preferred that tenderers submit with their tenders a list stating the type, capacity, and present location (so that inspection can be made if necessary) of the equipment in their possession or at their disposal which is immediately available for the carrying-out of the work within the time limit specified without in any way curtailing or delaying any Departmental project that may be under contract at this date.

No tender will be accepted or considered which contains an escalator clause or any other qualifying conditions, and the lowest or any tender will not necessarily be accepted.

It is preferred that tenderers submit with their tenders a schedule of proposed construction operations showing estimated monthly progress for each phase of the construction work.

DEPARTMENT OF HIGHWAYS**ADDENDUM 1****Rossland-Trail Electoral District****Project 2519—Southern Trans-Provincial Highway 3, Genelle Bluff Section****Special Provisions**

Add Clause 22—Roadway and Drainage Excavation:

Item 3 of the Schedule, Roadway and Drainage Excavation, shall be carried out according to section 201 of the General Specifications and all clauses of that section shall apply unless otherwise specified in these Special Provisions.

(a) *Type A excavation*—Because of the nature of rock, the faces of all cut slopes exceeding 20 feet shall be formed by preshearing or smooth wall blasting and continue throughout a cut.

The face (back line) holes shall be 2½ to 3 inches in diameter and they shall be uniformly spaced and a maximum of 3 feet apart. Xactex powder or equivalent shall be used in the face holes.

The charge shall be stemmed with clean stone chips or pea gravel, 100 per cent of which passes a ¾ inch sieve and only 10 per cent of which passes a No. 8 sieve. Stemming may be omitted and adjacent to the collar if the upper section tends to break out.

Drilling and blasting for preshearing shall be carried out 30 to 50 feet in advance of adjacent production blasting and presplit holes shall be fired in zero delay.

The adjacent line of holes to the back line shall have a spacing of 1½ times the back line spacing, i.e., for a back line spacing of 3 feet the second line spacing shall be 4½ feet. The second line of holes shall be drilled parallel to and offset from the backslope at a distance equal to the second line spacing.

Holes for smooth wall blasting shall lie in the face of the slope and be parallel with each other. Deviation from the slope face and from parallelism shall be no more than 6 inches in 25 feet. No smooth wall hole shall be drilled more than 2 feet below subgrade and no hole shall be longer than 25 feet unless the Contractor can demonstrate ability to drill within a 6-inch deviation at the end of the hole. If such holes at any time deviate more than 6 inches in their length, the permitted depth of hole shall be reduced till the acceptable deviation is obtained.

No. 3 inch production blast hole shall be drilled to less than 5 feet from the smooth wall face and no production blast hole of diameter greater than 3 inches shall be drilled to less than 10 feet from the face.

For smooth wall blasting the explosive, of a diameter not more than one-half that of the hole, shall be distributed evenly in the hole in a continuous column, or be evenly distributed by spaces.

The Contractor is advised that the Engineer will carry out some supervision of the smooth wall blasting operation.

The price bid for Item 3 (a) shall be full compensation for Type A excavation as described in section 201, and shall also include all costs for blasting and pre-splitting as described above, including the supply of materials. However, if after excavation commences the Engineer considers that a lesser hole spacing is required, the Contractor will be paid \$2 per lineal foot of drilling for any increase over the 3-foot back line and the 4½-foot second line spacing. This price shall be for drilling, loading, stemming, and supply of all materials.

Overbreak which occurs through no fault of the Contractor will be paid as outlined in section 201.7.

(b) *Rock cuts* (Clause 201.5)—Clause 201.5 Rock Cuts of the General Specifications is hereby cancelled and replaced with the following:

Excavation in rock shall be undertaken generally according to the accompanying drawings or as directed by the Engineer. Rock cuts shall be excavated and mucked out fully to subgrade (18 inches below construction grade).

The subgrade shall be constructed to a true and uniform surface as to line and grade preparatory to the application of select granular sub-base material. A tolerance of + 0.10 feet shall be permitted, except that no pinnacle of solid rock shall protrude above the design subgrade elevation.

Subgrade shall represent the payline in all rock excavations and any additional drilling, blasting, or subexcavation which may be required to construct subgrade to the tolerance above shall be considered incidental and no additional payment will be allowed.

Any required backfilling up to subgrade elevation shall be made with fine broken rock or clean granular material, or as ordered by the engineer. Regardless of

where the backfill material is obtained, no additional excavation payment will be allowed, but if the haul is beyond 1,000 feet, payment for overhaul will be allowed at the standard rates.

The work shall be so conducted, whether by blasting or otherwise, so that the sides of the cut shall be left in as regular and as reasonably safe condition as practicable. Excavated rock of suitable quality required for walls, riprap, paving, etc., shall be reserved and deposited in dumps if so ordered by the Engineer.

A berm of at least 2 feet shall be left between the top of slope of rock cuttings and the toe of slope of overlying materials. In solid rock cuts where pockets which will not drain are formed below the subgrade elevation by blasting, the Contractor shall, at his own expense, provide drainage by ditching to a free outlet, as ordered, and shall backfill both the pockets and the trench to subgrade elevation with broken rock or coarse gravel. In excavating side hill rock cuts and rock cliffs the Contractor shall exercise care and use precautionary methods so as not to break down, loosen, or otherwise damage the supporting rock below the subgrade level. In general, such cuts shall be worked from the top in lifts of such depth that no damage to the bench of rock below the subgrade will follow blasting. The Contractor shall be responsible for the methods used for any damage to the road-bed resulting from his operations.

(c) *Rock embankments*—The reference to "profile grade" in the third paragraph of section 201.10 is hereby amended to "subgrade." Subgrade is the grade upon which the select granular sub-base is to be placed.
